What is Progressivism

The Relationship of Educational Theory To Their Philosophic Source

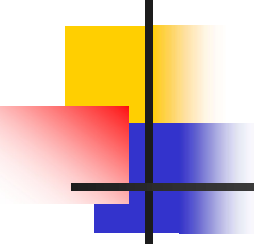

Educational Theorist

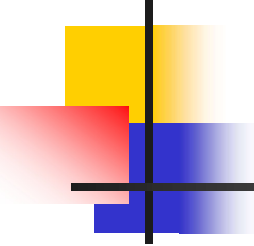

"We may, I think, discover certain common principles amid the variety of progressive schools now existing. To imposition from above is opposed expression and cultivation of individuality; to external discipline is opposed free activity; to learning from texts and teachers, learning through experience; to acquisition of isolated skills and techniques by drill is opposed acquisition of them as means of attaining ends which make direct vital appeal; to preparation for a more or less remote future is opposed making the most of the opportunities of present life; to statistics and materials is opposed acquaintance with a changing world."

John Dewey

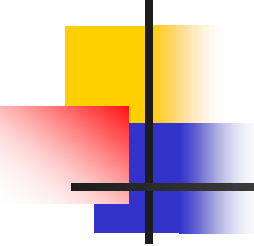

Educational Philosophy

- Adaptable to an ever-changing world
- Learn problem solving and rational thinking
- Lead students to become a productive citizen of society
- Enable students to function successfully in a competitive society
- Provide new experiences

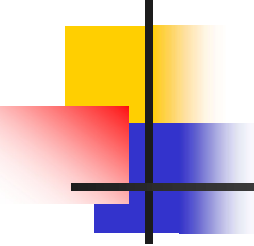

Curriculum

- Strong emphasis on problem solving and analysis
- Centered on activities and instruction
- Real-world instruction method with higher levels of investigation and analysis

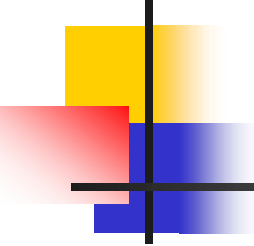

Discussion

- What is role of the teacher?
- What is role of the student?
- Classroom instruction plays important part in the students' learning. Why?

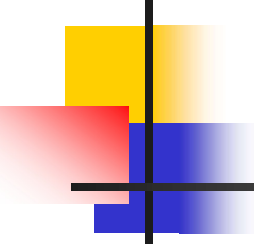

Learn Best

- Begin with student, not subject matter
- Teacher as challenger, inquiry leader
- Learning is active not passive
- Teachers provide experiences so students learn by doing
- Continual self-analysis and reflection
- Teacher as facilitator “guide on the side, not sage on the stage”

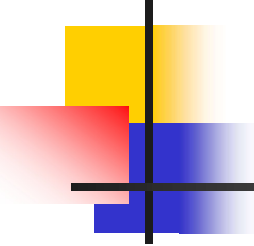

Skills or Knowledge

- Problem finding and solving skills
- Content determined by students' interests
- Humankind and knowledge are consistently changing, so prepare students for future with problem solving strategies to cope with life
- Learn what is important to them not “enduring truths”

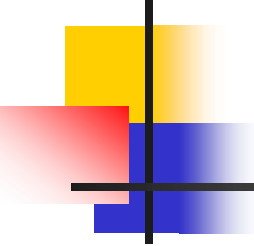

Role of the Teacher

- Administrator, facilitator, inquirer, and resource person
- Encourage creative and analytic thinking
- Encourage creativity and ingenuity to find the most viable solution
- Centered on an ever-changing society and real-world problem
- Centered on
- Exercise students minds in a practical manner

Role of the Student

- Student is responsible for his/her own actions and choices.

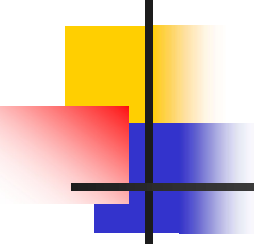

Discussion

“Children will educate themselves under the right conditions. They require guidance and sympathy far more than instruction.”

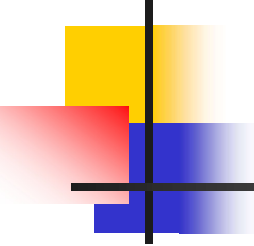

- Maria Montessori

<http://www.montessori.edu/>

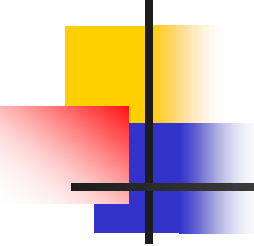

Metaphysics

The choices that we make along the way determine the rockiness or smoothness of the path. What we need to do is turn negatives into positives, learn from our mistakes, and enjoy whichever path we end up on.

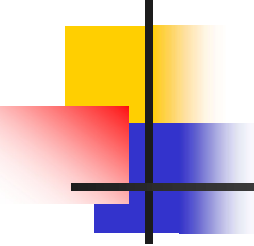

Epistemology

Seek ways to accommodate the students' individualism.

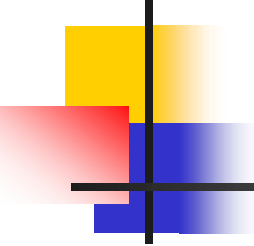

Axiology

Learning styles include cultural values.

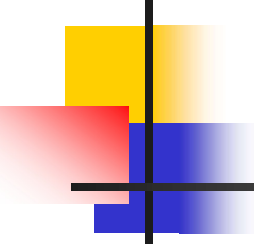

Summary

- Students are responsible for their own actions and choices.
- Students will be placed first in order of importance.
- Teacher is an administrator, facilitator, inquirer, and resource person.
- Teacher is to assist students in discussing the issues in problem solving that come throughout our decision-making.

People

- John Dewey
- Jean Jacques Rousseau
- Maria Montessori

Something to think about

"In modern times there are opposing views about the practice of education. There is no general agreement about what the young should learn either in relation to virtue or in relation to the best life; nor is it clear whether their education ought to be directed more towards the intellect than towards the character of the soul.... And it is not certain whether training should be directed at things useful in life, or at those conducive to virtue, or at non-essentials.... And there is no agreement as to what in fact does tend towards virtue. Men do not all prize most highly the same virtue, so naturally they differ also about the proper training for it."

Aristotle
