Plan

Today's Students

- Technologically sophisticated
- Expect user-friendly services
- Want accessible, available education at their time, place, and medium of choice
- Want dependable one-stop or no-stop service that is high tech but personable

Student Access to Technology

If students cannot access to the technology all the investment is wasted.

Computer Access Strategies

- Technology lab
- Campus access through plug-in ports or drop-in labs
- Provide workshops to improve students' computer literacy
- Provide common technical standards for computers

Closing Thought

Technology serves two purposes: 1) communication and collaboration needs and 2) academic needs. It is essential to have operational and strategic planning for the technology infrastructure. The plan should be driven by the college's overall vision and strategy for teaching. In addition, implementation priorities must be set for both the level and the areas of investment. Keeping in mind that technology is not a one-off investment, and there is a continuous need to replace and update. Furthermore, the cost of the physical infrastructure and human support is a very big expenditure item that needs to be reviewed annually, and it should be a part of the budget planning. For this reason, it is necessary for the institution to develop and maintain a robust information technology infrastructure and a strategy plan for moving forward.
